

Through energy management, Hanley Energy has saved clients more than €8 million since 2009

You're facing rising energy costs and you cannot guarantee a secure and continuous energy supply. That's why you need to make energy management a top priority.

To maintain full operational and competitive advantage, it is essential to implement energy management in a structured way. This can achieve sustained energy reductions of up to 20%, with zero impact on operations.

Since its formation in 2009, Hanley Energy has helped customers achieve sustained energy savings of more than €8 million.

Tailored Energy Management Solutions

Energy management, when implemented in a structured way, can achieve sustained energy reductions of up to 20%, with zero impact on operations.

Hanley Energy provides bespoke energy monitoring and targeting (M&T) technology and services. An M&T system allows you to gather and monitor real-time energy usage data from energy meters at multi-process/multi-site locations. The system, which is easy to retrofit, can be configured to track progress against targets and establish user-alert with respect to established thresholds for consumption and tariffs. This enables you to develop robust energy management programmes, ultimately leading to reduced energy consumption, spanning electricity, gas, water, fuel-oil, steam and compressed air.

We work with a diverse client base, including but not limited to large manufacturing, small-medium enterprises, buildings (commercial, leisure, mixed-use), educational facilities, local authorities, telecommunications and data-centre providers.

Our customised approach facilitates compliance with structured energy management systems such as ISO 50001:2011. This service is complemented by expert delivery of projects designed to optimise energy supply and efficiency. Analysis of energy data allows for excellent operational control.

"Largo Foods are delighted to partner with Hanley Energy. They have enabled us to cut energy costs by 7%. Prior to working with Hanley Energy, I found it difficult to track how much energy was being used.

"Hanley Energy's solution started with a comprehensive assessment to understand how energy was used. A bespoke and modular energy monitoring system was installed. This support has allowed me to understand how and where energy is used; it allows me to manage energy in a structured way and is an essential building block for compliance with ISO 50001.

"Hanley Energy didn't just provide me with the technology and walk away; they provided me with tailored support, and added value with their expert knowledge of energy management."

TRUSTED ENERGY PARTNERS

Our customised system provides clients with detailed energy data, allowing for management of a range of energy issues, from identification of power quality and power factors to tracking brownout events. The energy management system allows for real-time energy cost, market and supplier monitoring, thus allowing clients to successfully manage energy procurement. We will customise an end-to-end solution that integrates technology and energy management expertise.

Hanley Energy takes a 5-step approach to delivering Energy Management Services.

Benefits of Partnering with Hanley Energy

Proven ability

We have successfully delivered energy and critical power management solutions to public and private sector organisations.

Customised solutions

We work with clients to customise solutions to meet organisational needs.

Technology solutions

We have access to leading technology solutions, including building automation, M&T systems and critical power and cooling equipment.

Support We provide clients with extensive end-to-end support, ensuring the project remains on schedule and on budget.

Partnership

We offer clients training and networking opportunities to ensure best practice is shared.

Cost savings

Our cost-effective solutions save money – either through reducing energy bills or ensuring ‘up-time’. Increased operations contribute to competitiveness.

About Us

Hanley Energy Ltd is a dynamic, Irish-owned and Irish-managed company specialising in the design, supply, installation and support of customised energy and critical power management solutions for a diverse range of business sectors.

Located in Drogheda, Co. Louth, Hanley Energy has delivered cost-effective solutions for clients located in Ireland, the UK and the USA.
